Key Metrics, Critical Issues & Quick Wins

2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **tentare.app** for a **SaaS (Pilates studio management) + local marketplace component (Tentare Network)** site, generated on September 10, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

67/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Homepage title/H1/meta says "en Barcelona" while the rest of the site (/funcionalidades, /comparativa, schema) is national in scope — two-way intent mismatch
2. **Info:** /network/instructoras/ciudad/barcelona canonical tag points to the bare homepage instead of itself, risking full suppression from local search results
3. **Info:** /network/instructoras/ciudad/barcelona is near-empty (40 words, 1 listing) and the URL pattern is designed to scale to more cities before the template is fixed
4. **Info:** /network/instructoras has 2.5-3.5x elevated TTFB (450-640ms vs ~185ms baseline) — likely an uncached listing query
5. **Info:** No owned round-up/comparison asset for broad commercial queries ("mejor software gestión pilates"), currently won by third-party listicles

Quick Wins:

1. Fix the canonical tag on /network/instructoras/ciudad/barcelona (one-line template fix)
2. Drop the city qualifier from the homepage title/H1/meta
3. Add ItemList schema to the marketplace listing/city pages
4. Give /network its own H1 instead of inheriting the generic SaaS hero
5. Populate lastmod on the 37 sitemap URLs currently missing it

2. Audit Categories

2.1 Technical SEO

Score: **78/100**

What Works

- HTTPS + HSTS (2yr max-age)
- X-Frame-Options: DENY + CSP frame-ancestors 'none'
- Self-referencing canonicals consistent on www+https across the 6-page sample
- Mobile viewport meta present
- Clean URL structure across all 139 sitemap URLs (no trailing slashes, no query params, no uppercase, 100% www+https)
- No redirect chains, no console errors observed
- Server-rendered (not SPA) on every page sampled
- Valid sitemap.xml, correct namespace, no size-limit issues

Findings

robots.txt blanket Disallow: /network/ overridden by more-specific Allow rules — correct today, fragile for future routes **Medium**

Per real precedence rules (most-specific-wins), no sitemap URL is currently blocked, but any new /network/* route not covered by an explicit Allow would fall through to the blanket disallow.

Recommendation: Restructure to default-deny with explicit allow-listed public leaves instead of the current mixed ordering.

37 of 139 sitemap URLs (27%) have no lastmod, inconsistently within sections **Medium**

Google may stop trusting lastmod sitewide if it's unreliable a meaningful fraction of the time.

Recommendation: Populate lastmod from real content-store timestamps or drop the field entirely.

HSTS missing includeSubDomains/preload **Low**

Base directive present and long-lived; just missing the two optional directives.

Recommendation: Add includeSubDomains; preload if all subdomains are HTTPS-only.

No X-Content-Type-Options: nosniff observed **Low**

Standard defense-in-depth header missing on the homepage response.

Recommendation: Add the header.

/reservar/<studio> booking-widget pages indexed with no robots.txt exclusion **Info**

4 pages today, one per signed customer; architectural note for product confirmation, not a defect.

Recommendation: Confirm this is intentional; monitor as the count grows with customer count.

Broad Access-Control-Allow-Origin: * on homepage HTML response **Info**

Likely a CDN config artifact, not scoped to a specific route.

Recommendation: Confirm with tentare-seguridad it doesn't also apply to authenticated API responses.

2.2 Content Quality

Score: **62/100**

What Works

- /precios: specific, falsifiable pricing claims (exact prices, exact limits, no vague marketing language)
- /recursos/estudios-pilates-de-exito: well-sourced, dated, attributed external citations — strongest E-E-A-T page found
- /comparativa/tentare-vs-bsport: unusually honest comparison, concedes ground to competitor, dated and disclaimed
- /funcionalidades/sustituciones: concrete operational scenarios, discloses known limitations
- /glosario: neutral, well-scoped definitions with cross-links
- /ayuda/empezar/crear-tu-cuenta: byline + update date + human-support closer

Findings

/network/instructoras/ciudad/barcelona is textbook thin/doorway-page risk **High**

Only 40 words extracted, mostly UI chrome; 1 listing. Confirmed independently by content, local, visual, and sxo agents.

Recommendation: Noindex until minimum inventory (e.g. 3+ instructors), or expand with genuinely unique local content.

/comparativa/tentare-vs-bsport thin (214 words prose); cluster risk unverified across 12 other pages

Medium

Extrapolation from 1 of 13 comparativa pages — if the other 12 follow the same template, near-duplicate content risk at scale.

Recommendation: Verify unique-content ratio across all 13 before concluding the cluster is fine.

/soluciones/estudio-de-yoga thin content Medium

197 words, well below the ~800-word floor for a commercial-intent solutions page.

Recommendation: Expand with yoga-specific detail or noindex/deprioritize if intentionally a placeholder.

/ayuda/* cluster depth-vs-complexity not verified beyond 1 sample Medium

The sampled article (account creation) was appropriately scoped; more complex topics (billing, permissions) not checked.

Recommendation: Spot-check 3-5 more articles on complex topics.

2.3 On-Page SEO

Score: 55/100

What Works

- /comparativa/tentare-vs-X pages match the structural pattern seen in real competitor comparison SERPs
- /recursos/* guides correctly typed as procedural how-to content

Findings

Homepage geo-branding contradicts national SaaS scope Critical

Title/H1/meta say "en Barcelona" while /funcionalidades, /comparativa, and the SoftwareApplication schema (no LocalBusiness, no address/map) treat the product as national — a two-way intent mismatch confirmed by independent SXO analysis against real SERPs.

Recommendation: Drop the city qualifier from title/H1/meta (recommended, zero cost) or build genuine local-page signals if Barcelona-first is a deliberate strategy.

/network hub H1 is the generic SaaS hero, not marketplace-relevant Medium

Only H1 is "Tu estudio, A OTRO NIVEL", unrelated to the instructor marketplace, Pilates/Yoga, or location.

Recommendation: Give /network its own H1 naming the marketplace and its core entities.

2.4 Schema / Structured Data

Score: **78/100**

What Works

- Rich, valid JSON-LD graph on homepage (SoftwareApplication+Offer, FAQPage, Organization+ContactPoint, WebSite+SearchAction, SiteNavigationElement)
- Zero fabricated aggregateRating/Review anywhere checked — correct honest omission
- Pricing in schema matches visible pricing
- /glosario correctly uses DefinedTermSet/DefinedTerm
- Instructor profile has real, non-fabricated Person schema with appropriate city-level-only address
- BreadcrumbList present and correctly nested across /network

Findings

Listing/city pages in /network lack ItemList schema **Medium**

Only BreadcrumbList present on listing and city pages; ItemList is the correct non-fabricated pattern for a directory listing.

Recommendation: Add ItemList with real ListItem entries only, before the directory scales.

FAQPage schema present on homepage — no current Google SERP benefit **Info**

Google retired FAQ rich results for all sites May 7 2026; markup is technically valid, just no longer produces a rich result.

Recommendation: No action required; don't invest further in expanding it for SERP purposes.

68% of the site's schema not independently verified **Info**

Only home, precios (partial), funcionalidades (hub+1), comparativa (hub+1), glosario, and one network profile were checked.

Recommendation: Extend coverage in a follow-up pass, particularly /recursos and /ayuda.

2.5 Performance (CWV)

Score: **60/100**

What Works

- Hero LCP candidate is a real, correctly preloaded `<img>`, not the autoplay video (which loads below the fold with `preload="metadata"`)
- Self-hosted fonts via `next/font`, cached immutably — avoids third-party font-loading round trip
- Zero third-party render-blocking scripts across the 5 pages checked
- DOM size within budget (~1,100-1,300 elements) on all 5 pages checked
- Explicit width/height on images that matter for CLS prevention
- `/_next/static/*` assets (JS, fonts, optimized images) correctly cached immutable, `max-age=31536000`

Findings

public/ static assets (video, posters, logo pieces) never cached by the browser **Medium**

cache-control: max-age=0, must-revalidate confirmed via `curl -I` on 5 files including ~1.8MB of video, unlike `/_next/static/*` which is immutable — forces revalidation every repeat visit.

Recommendation: Serve through the Next.js asset pipeline or add explicit long-lived Cache-Control headers with filename-hash cache-busting.

17 preloaded .woff2 files across 9 font families on the homepage **Medium**

All self-hosted and cached correctly, but 17 concurrent font preloads compete with the LCP image and critical CSS for early bandwidth.

Recommendation: Audit which fonts/weights are actually needed above the fold; lazy-load the rest.

Cold-path TTFB substantially worse than warm-path on 2 of 5 routes **Low-Medium**

Measured directly: `/network/instructoras` 1.96s (cold) vs 0.44-0.69s (warm); `/funcionalidades/sustituciones` 1.02s (cold) vs 0.12-0.33s (warm). Consistent with a serverless cold start or edge cache-miss on less-frequently-hit routes.

Recommendation: Check CrUX field TTFB for these two routes once an API key exists; consider ISR/static generation or edge caching for the instructor listing data fetch.

Hero `<img>` element lacks `fetchPriority="high"` on the tag itself **Low**

Only the preload `<link>` carries `fetchPriority="high"`; the `<img>` tag doesn't, suggesting the Image component's priority prop may not be set.

Recommendation: Confirm the hero `<Image>` uses the priority prop.

Homepage JS payload ~1.48MB uncompressed across 22 async chunks **Low**

Not render-blocking (all async), but relevant main-thread weight for INP; not verified with a real browser in this environment.

Recommendation: No action needed unless a future Lighthouse/unlighthouse run shows a confirmed INP/TBT problem tied to this.

Core Web Vitals (LCP, INP, CLS) not measured — full field-data gap **N/A - measurement gap**

No Google API credentials; unlighthouse crashed twice on a sandbox resource constraint before reaching the Lighthouse-audit phase; no Chrome binary on PATH for standalone lighthouse CLI.

Recommendation: Configure PSI/CrUX API key or re-run unlighthouse/lighthouse on a machine with more headroom and a real Chrome install before drawing CWV pass/fail conclusions.

2.6 AI Search Readiness (GEO)

Score: **70/100**

What Works

- AI crawlers (GPTBot, ClaudeBot, PerplexityBot, etc.) allowed via blanket robots.txt Allow rule
- Homepage server-rendered with rich JSON-LD entity signals
- /glosario close to ideal citability format (short, self-contained, neutral definitions)
- llms.txt/RSL absence correctly scored Low/Info, not treated as a real gap

Findings

Passages shorter than optimal AI-citation length or buried in tables **Medium**

Glossary definitions run ~30-60 words vs the 134-167 word optimum; feature-page substance often locked in comparison tables rather than prose.

Recommendation: Add 130-170 word direct-answer paragraphs above tables on cornerstone pages.

Off-page brand signals (YouTube, Reddit, Wikipedia, LinkedIn) unverified **Medium**

Not checkable with tools available in this session; YouTube presence has the single highest correlation with AI citation of any signal studied.

Recommendation: Verify actual presence on each platform (~1hr) before further GEO investment; a YouTube channel is the highest-leverage single addition if absent.

Headings not consistently question-form **Low**

Sampled H2s are declarative/marketing style rather than matching how users phrase AI prompts.

Recommendation: A/B question-form H2/H3 variants on cornerstone informational pages.

2.7 Images

Findings

Images category not audited in this pass **Info**

No seo-images subagent was run; excluded from the health score rather than assigned a fabricated value.

Recommendation: Run /seo images tentare.app as a follow-up.

2.8 Backlinks

What Works

- No toxic or spam link signals found (vacuously, given no data)

Findings

tentare.app not present in Common Crawl web graph **Low/Info**

Expected for a domain that opened to the public 2026-08-19; absence in one free dataset, not evidence of zero real backlinks. No Moz/Bing keys configured for a fuller check.

Recommendation: Optional: Moz free tier or Bing Webmaster Tools for actual visibility, not urgent.

3. Action Plan

Phase 1: Critical Fixes Now

- Fix canonical tag on /network/instructoras/ciudad/barcelona to self-reference
- Resolve the homepage 'en Barcelona' scope mismatch (drop city qualifier, recommended)

Phase 2: High-Impact Improvements Next week

- Run the doorway/uniqueness test on the Barcelona city-page template before adding Madrid
- Expand or gate /network/instructoras/ciudad/barcelona content depth
- Investigate and fix /network/instructoras elevated TTFB

Phase 3: Content & Authority This month

- Populate real lastmod across 37 missing sitemap URLs
- Verify content uniqueness across the other 12 /comparativa/* pages
- Expand /soluciones/estudio-de-yoga
- Restructure robots.txt /network/ precedence for future-proofing
- Give /network hub a marketplace-relevant H1
- Add ItemList schema to marketplace listing/city pages
- Verify off-page brand presence (YouTube/Reddit/Wikipedia/LinkedIn)
- Evaluate an owned round-up/comparison asset for broad commercial queries
- Cross-link the Verifactu guide with relevant comparativa pages
- Add direct-answer paragraphs above tables on cornerstone pages
- Fix decorative logo/subhead contrast overlap on desktop/laptop/tablet home hero

Phase 4: Monitoring & Iteration Ongoing

- Configure Google API credentials (PSI/CrUX/GSC/GA4) to replace estimates with real field data
- Run /seo images for the untouched Images category
- Re-check /comparativa, /network/instructoras, /reservar cluster sizes against the 30/50-page thresholds as they grow
- Verify GSC impressions for /comparativa/tentare-vs-mindbody and /recursos/facturacion-electronica-verifactu

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — September 10, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
